

SEALED UPVC WINDOWS AGAINST GASES

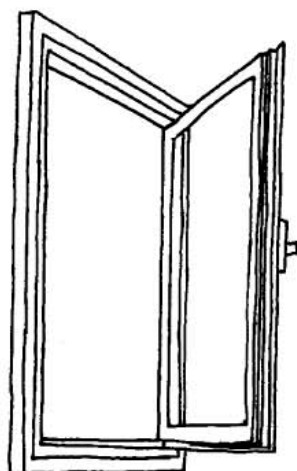

The decorative UPVC window specifically intended for a sealed room or a sealed story (in a building), with a simple hinge opening.

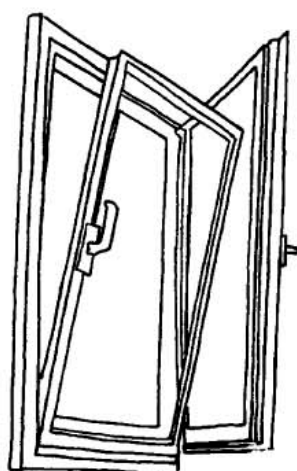

The UPVC window is sealed against gases and water thanks to its special plastic frame. The window corners are welded to each other and are transformed into a single, seamless unit, ensuring perfect impermeability.

The UPVC windows are easy to design and install and do not require long-term maintenance. They are suitable for installation on both gypsum and plaster walls and can be integrated with rolling screen windows or shaded windows.

Dry model

Structure:

The window is manufactured with a PVC frame, made by Veka AG, Germany. The frame is reinforced, using some of the most advanced plastic materials, and is an excellent substitute for wood and aluminum thanks to its impressive characteristics.

Acoustic & Thermal insulation:

The window has maximum thermal and acoustic insulation and is highly resistant over decades to chemicals, salt water, sun rays and other weather hazards.

Windows dimensions:

The window dimensions are suitable for all existing special sealed rooms or stories, other technical demands upon request.
